

## Technical Information

- 1. Belt S.06 Pitch 6.25 mm (.25")**
- 2. Belt S.12 Pitch 12.5 mm (.49")**
- 3. Belt S.25 Pitch 25 mm (.98")**
- 4. Belt S.50 Pitch 50 mm (1.97")**
- 5. Belt S.75 Pitch 75 mm (2.95")**
- 6. S.25 Radius belts. Pitch 25 mm (.98")**
- 7. S.50 Radius belts. Pitch 50 mm (1.97")**
- 8. Accessories**
- 9. Construction and Installation Instructions**

## 1.Belt S.06

Pitch 6.25 mm (.25")

## S.06-401

**FAT. PENDING**

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square ft
Polyacetal (POM)	Min. 165	.57

Belt surface: Open belt with a smooth surface.  
 Open area: 40%. Biggest opening 4 x 8 mm (.16 x .31).  
 Strength: Ideal choice for light transportation.  
 Material/colour: POM / Natural  
 Cleanability: Excellent. FSIS  
 Accessories:  
 Application: Transport of products that require a very small transfer. Will run over a 1/4" nosebar.  
 Standard widths: Increments of 40mm (1.57), **starting** at 120mm (4.72)

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside-diameter		Round bore		Square bore	
					mm	in.	mm	in.
20	44 (1.73)	39 (1.54)	35 (1.38)		20			
36	74 (2.91)	69 (2.72)	65 (2.56)		20/25		25	
48	96 (3.78)	91 (3.58)	87 (3.43)		20/25		25/40	

## 2. Belt S.12

Pitch 12.5 mm (.49")

## S.12-401

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	400	.71
Polypropylene (PP)	535	.71
Polyacetal (POM)	975	1.00

Belt surface: Open belt with a smooth surface.  
 Open area: 40%. Biggest opening 6 x 8 mm (.24 x .31)  
 Strength: Ideal choice for light transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories:  
 Application: Cooling belt for small nose bar (14mm minimum)  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 (4.72), etc. Special widths available on request  
 Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside-diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
10	50 (1.97)	42 (1.65)	33 (1.30)	16 (.63)	20	.75		
19	84 (3.31)	76 (2.99)	67 (2.64)	16 (.63)	20/25/30/40	1	25/40	1½
24	104 (4.09)	96 (3.78)	87 (3.43)	16 (.63)	20/25/30/40	1	25/40	1½
28	120 (4.72)	112 (4.41)	103 (4.05)	16 (.63)	20/25/30/40	1	25/40	1½

## S.12-406

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	400	.92
Polypropylene (PP)	535	.92
Polyacetal (POM)	975	1.22

Belt surface: Perforated flat top.  
 Open area: 8%. Biggest opening 4 x 2,5 mm (.16 x .10)  
 Strength: Ideal choice for light transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 25 mm (.98) flights, friction top.  
 Application: Cooling belt for small nose bar (14mm minimum)  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 (4.72), etc. Special widths available on request

Food approved

Sprocket Data

## S.12-408

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	400	.92
Polypropylene (PP)	535	.92
Polyacetal (POM)	975	1.22

Belt surface: Flat top.  
 Open area: Closed.  
 Strength: Ideal choice for light transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 25 mm (.98) flights, friction top.  
 Application: Cooling belt for small nose bar (14mm minimum)  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 (4.72), etc. Special widths available on request

Food approved

Sprocket Data

## S.12-408F (friction)

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Copolymer:	500	1.22

Belt surface: Flat top with friction surface.  
 Open area: Closed.  
 Strength: Ideal choice for light transportation.  
 Colour: nat/white.  
 Cleanability: Excellent. FSIS  
 Accessories: 25 mm (.98) flights  
 Application: Transport of goods on a slightly inclined conveyor.  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 (4.72), etc. Special widths available on request  
 Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside-diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
10	56 (2.20)	42 (1.65)	33 (1.30)	16 (.63)	20	.75		
19	90 (3.54)	76 (2.99)	67 (2.64)	16 (.63)	20/25/30/40	1	25/40	1½
24	110 (4.33)	96 (3.78)	87 (3.43)	16 (.63)	20/25/30/40	1	25/40	1½

## S.12-448

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	400	.92
Polypropylene (PP)	535	.92
Polyacetal (POM)	975	1.22

Belt surface: Closed top with an inverted diamond pattern  
 Open area: Closed.  
 Strength: Ideal choice for light transportation.  
 Material/colour: PE/nat and PP/white  
 Cleanability: Excellent. FSIS  
 Accessories: 25 mm (.98) flights, friction top.  
 Application: Proofing belt for raw dough. The inverted diamond pattern ensures easy product release.  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 (4.72), etc. Special widths available on request  
 Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside-diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
10	50 (1.97)	42 (1.65)	33 (1.30)	16 (.63)	20	.75		
19	84 (3.31)	76 (2.99)	67 (2.64)	16 (.63)	20/25/30/40	1	25/40	1½
24	104 (4.09)	96 (3.78)	87 (3.43)	16 (.63)	20/25/30/40	1	25/40	1½
28	120 (4.72)	112 (4.41)	103 (4.05)	16 (.63)	20/25/30/40	1	25/40	1½

### 3. Belt S.25

Pitch 25 mm. (.98")

## S.25-100

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	360	.92
Polypropylene (PP)	500	.92
Polyacetal (POM)	840	1.22

Belt surface: Open belt with a smooth surface.  
 Open area: 20 %. Biggest opening 3 x 3 mm (.12 x .12)  
 Strength: Ideal choice for light transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Good.  
 Accessories: 5 (.20), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards. 25 (.98) and 50 mm (1.97) friction flights.  
 Application: Catering, dairy, snacks and seafood industry.  
 Standard widths: Increments of 6 mm (.24), e.g. 100 (3.93), 106 mm (4.17) etc

Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
6	59 (2.32)	50 (1.97)	41 (1.61)	40 (1.57)	20			
12	106 (4.17)	97 (3.82)	88 (3.46)	40 (1.57)	20/25/30/40	1	40	1½
20	172 (6.69)	161 (6.34)	152 (5.98)	40 (1.57)	25/30/40	1	40/60	1½/2½

## S.25-400

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	425	1.0
Polypropylene (PP)	710	1.0
Polyacetal (POM)	1000	1.43

Belt surface: Open belt with a smooth surface.  
 Open area: 29 %. Biggest opening 6 x 10 mm (.24 x .39)  
 Strength: Ideal for medium weight transportation..  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 5 (.20), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards., friction top.  
 Application: Seafood, red meat, vegetables, bakery and food industry in general. Even cooling/freezing and washing.  
 Standard widths: Increments of 25 mm (.98), e.g. 100 (3.93), 125 mm (4.92) etc  
 Special widths available on request

Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore

8	70 (2.76)	61 (2.40)	52 (2.05)	20 (.79)	20/25	1	25	1
12	104 (4.09)	95 (3.74)	86 (3.39)	20 (.79)	20/25/30/40	1/1¼	25/40	1½
20	169 (6.65)	160 (6.30)	151 (5.94)	35 (1.38)	25/30/40	1/1¼	25/40/60	1½/2½

## S.25-400F (friction)

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Copolymer:	600	1.43

Belt surface: Friction surface.  
 Open area: 29 %. Biggest opening 6 x 10 mm (.24 x .39)  
 Strength: Ideal for medium weight transportation..  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 5 (.20), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards., friction top.  
 Application: Transport of packed goods on a slightly inclined conveyor.  
 Standard widths: Increments of 25 mm (.98), e.g. 100 (3.93), 125 mm (4.92) etc  
 Special widths available on request

Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore

6	54 (2.28)	45 (1.77)	36 (1.42)	20 (.79)	20			
8	70 (2.91)	61 (2.40)	52 (2.05)	20 (.79)	20/25	1	25	1
12	104 (4.25)	95 (3.74)	86 (3.39)	20 (.79)	20/25/30/40	1 1/4	25/40	1 1/2
20	169 (6.81)	160 (6.30)	151 (5.94)	35 (1.38)	25/30/40	1 1/4	25/40/60	1 1/2/2 1/2

## S.25-402

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	470	1.22
Polypropylene (PP)	750	1.22
Polyacetal (POM)	1000	1.54

Belt surface: Raised ribs, 5 mm.  
 Open area: 29 %. Biggest opening 6 x 10 mm (.24 x .39)  
 Strength: Ideal for medium weight transportation..  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 5 (.20), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards., friction top.  
 Application: Transport of products which demand a low contact surface.  
 Standard widths: Increments of 25 mm (.98), e.g. 100 (3.93), 125 mm (4.92) etc  
 Special widths available on request

Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
6	54 (2.40)	45 (1.77)	36 (1.42)	20 (.79)	20			
8	70 (3.07)	61 (2.40)	52 (2.05)	20 (.79)	20/25	1	25	1
12	104 (4.41)	95 (3.74)	86 (3.39)	20 (.79)	20/25/30/40	1 1/4	25/40	1 1/2
20	169 (6.97)	160 (6.30)	151 (5.94)	35 (1.38)	25/30/40	1 1/4	25/40/60	1 1/2/2 1/2

## S.25-406

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	600	1.22
Polypropylene (PP)	840	1.22
Polyacetal (POM)	1600	1.64

Belt surface: Perforated flat top.  
 Open area: 13 %. Biggest opening 1 x 6 mm (.04 x .24)  
 Strength: Ideal for medium weight transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Good  
 Accessories: 3 (.12), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards. 25 (.98) and 50 mm (1.97) friction flights.  
 Application: Dairy, vegetables, poultry, snacks, sweet goods and other industries that handle products requiring drainage and very small openings.  
 Standard widths: Increments of 10mm (.39), e.g. 100 (3.93), 110 (4.33)  
 Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore	
					mm	in.	mm	in.
6	54 (2.13)	45 (1.77)	36 (1.42)	20 (.79)	20			
8	70 (2.76)	61 (2.40)	52 (2.05)	20 (.79)	20/25	1	25	1
12	104 (4.09)	95 (3.74)	86 (3.39)	20 (.79)	20/25/30/40	1 1/4	25/40	1 1/2
20	169 (6.65)	160 (6.30)	151 (5.94)	35 (1.38)	25/30/40	1 1/4	25/40/60	1 1/2/2 1/2

## S.25-408

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	600	1.22
Polypropylene (PP)	840	1.22
Polyacetal (POM)	1600	1.74

Belt surface: Flat top.  
 Open area: Closed.  
 Strength: Strongest belt in the S.25 series. Ideal for medium weight transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Good.FSIS  
 Accessories: 3 (.12), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards. 25 (.98) and 50 mm (1.97) friction flights.  
 Application: Transport of small products such as machine components. Vulcanising belt for the rubber industry.  
 Standard widths: Increments of 10mm (.39), e.g. 100 (3.93), 110 (4.33)  
 Food approved

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch diameter	C= Inside diameter	Hub width:	Round bore		Square bore

## S.25-411

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	425	1.22
Polypropylene (PP)	710	1.22
Polyacetal (POM)	1080	1.54

Belt surface: Open net-like belt with a curved surface.  
 Open area: 26 %. Biggest opening 3 x 6 mm (.12 x .24)  
 Strength: Ideal for medium weight transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Excellent. FSIS  
 Accessories: 3 (.12), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards. 25 (.98) and 50 mm (1.97) friction flights.  
 Application: Fish, meat, vegetables, frozen food etc. Suitable for blanching belts and boiling of noodles.  
 Standard widths: Increments of 25mm (.98), e.g. 100 (3.93), 125 (4.92)  
 Food approved

## S.25-418

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	600	1.22
Polypropylene (PP)	840	1.22
Polyacetal (POM)	1600	1.74

Belt surface: Rough top  
 Open area: Closed.  
 Strength: Strongest belt in the S.25 series. Ideal for medium weight transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue  
 Cleanability: Good.FSIS  
 Accessories: 3 (.12), 25 (.98) and 50 mm (1.97) flights, 25 (.98) and 50 mm (1.97) side guards.  
 Application: Pallets, doors, panels. The rough top ensures a higher friction as well as extra wear surface.  
 Standard widths: Increments of 10mm (.39), e.g. 100 (3.93), 110 (4.33)  
 Food approved

## S.25-420

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	600	1.64
Polypropylene (PP)	840	1.64
Polyacetal (POM)	1600	2.25

Belt surface: Raised ribs – drained – for the use of finger transfer plates.  
 Open area: 14 %. Biggest opening 10 x 2 mm (.39 x .08)  
 Strength: Ideal for medium weight transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue.  
 Cleanability: Excellent. FSIS  
 Accessories: Finger transfer plates.  
 Application: Transport of small products, such as bottles, glass and machine components.  
 Standard widths: Increments of 10mm (.39), e.g. 100 (3.93), 110 (4.33)  
 Food approved

Sprocket Data

Belt surface:	Perforated flat top.
Open area:	9 %. Biggest opening 1 x 6 mm (.04 x .24)
Strength:	The right belt for medium-heavy transportation.
Material/colour:	PE/nat, PP/white and grey. POM/blue.
Cleanability:	Excellent. FSIS.
Accessories:	25(.98), 50(1.97), 75(2.95) and 100 mm(3.94) flights. Extended and bent flights. 75(2.95) and 150 mm(5.91) supported flights. 50(1.97), 75(2.95), 100(3.94) and 150 mm(5.91) side guards. 50 mm(1.97) comb flights, friction top. Hold-down. Flights fitted with a round top Friction top.
Application:	Goods and other industries that handle products requiring drainage and very small openings.
Standard widths:	Increments of 10 mm(.39), e.g. 100(3.94), 110 mm(4.33)
Food approved

## S.50-838

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	800	1.64
Polypropylene (PP)	940	1.64
Polyacetal (POM)	1385	2.46

Belt surface: Structure top with 3 mm (.12) cones.  
 Open area: Closed.  
 Strength: The right belt for medium-heavy transportation.  
 Material/colour: PE/nat, PP/white and grey. POM/blue.  
 Cleanability: Excellent. FSIS.  
 Accessories: 3 (.12), 25(.98), 50(1.97), 75(2.95) and 100 mm(3.94) flights. Extended and bent flights. 75(2.95) and 150 mm(5.91) supported flights. 50(1.97), 75(2.95), 100(3.94) and 150 mm(5.91) side guards. Hold-down. Flights fitted with a round top.  
 Application: Seafood, red meat, vegetable, sweets etc.  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 mm (4.72) **Special widths available on request.**

Food approved

## S.50-906

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyethylene (PE)	3225	2.66
Polypropylene (PP)	4000	2.66
Polyacetal (POM)	6880	3.89

Belt surface: Perforated flat top.  
 Open area: 13 %. Biggest opening 7 x 11 mm (.28 x .43)  
 Strength: The right belt for very heavy applications.  
 Material/colour: PP, POM/black.  
 Cleanability: Good.  
 Accessories: 25 mm (.98) flight.  
 Application: Very heavy transportation.  
 Assembling belt for cars.  
 Truck loading systems.  
 Standard widths: Increments of 20 mm (.79), e.g. 100 (3.94), 120 mm (4.72) **Special widths available on request.**

## 5. Belt S.75

Pitch 75mm (2.95")

## S.75-908

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyacetal (POM)	10,750	6.76

Belt surface:	Closed flat top.
Open area:	Closed.
Strength:	The right belt for very heavy applications.
Material/colour:	POM/black.
Cleanability:	Good.
Accessories:	50 mm comb flight, 40 mm side guards.
Application:	Very heavy transportation. Assembling belt for cars. Truck loading systems.
Standard widths:	Increments of 25 mm, e.g. 100, 125 mm etc

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch-diameter	C= Inside-diameter	Hub width:	Round bore		Square bore	
All sprockets are machined  For ex. 15				upon request	mm	in.	mm	in.
							130x130	

## S.75-938

Belt Data		
Materials	Max. belt pull Lb/ft of width	Belt weight lb/square foot
Polyacetal (POM)	10,750	6.76

Belt surface: Closed with 3 mm (.12) non skid pattern.  
 Open area: Closed.  
 Strength: The right belt for very heavy applications.  
 Material/colour: POM/black.  
 Cleanability: Good.  
 Accessories: 50 mm comb flight, 40 mm side guards.  
 Application: Very heavy transportation.  
 Assembling belt for cars.  
 Truck loading systems.  
 Standard widths: Increments of 25 mm, e.g. 100, 125 mm etc

Sprocket Data								
No. of teeth	A= Outside diameter	B= Pitch-diameter	C= Inside-diameter	Hub width:	Round bore		Square bore	
All sprockets are machined				40	mm	in.	mm	in.
For ex. 12	314	280	250				60/80/90	

## **6. S.25 Radius Belt**

## S.101

Belt Data.			
Belt material	Rods	Max. belt pull Lb	Belt weight lb/square foot
Polyacetal (POM)	PP	165	1.43
	Nylon	265	1.43
Polypropylene (PP)	PP	132	.92
	Nylon	200	.92

Belt surface: Smooth.  
 Open area: 52 %  
 Strength: The ideal choice for medium weight.  
 Material/colour: POM, PP  
 Cleanability: Good  
 Accessories: 25 (.98), 50 (1.97) and 75 (2.95) mm flights, friction top, hooks or tabs.  
 Application: Spiral coolers, radius conveyors.  
 Construction: Side modules, centre modules.  
 Width interval: Normally 20 mm (.79) eg 210 (8.27), 230 mm (9.06)  
 Inner radius: Collapse factor – see next page.  
 Food approved

## Hook Distance

## S.101Track191

Belt material	Belt Data.			
	Rods	Max. belt pull <b>Straight</b> (lb)	Max. belt pull <b>Curve</b> (lb).	Belt weight lb/square foot
Polyacetal (POM)	Nylon	880	230	1.43
Polypropylene (PP)	PP	550	150	.92

Belt surface: Smooth.  
 Open area: 52 %  
 Strength: Ideal for medium weight curves.  
 Material/colour: POM, PP  
 Cleanability: Good  
 Accessories:  
 Application: Radius conveyors.  
 Construction: Single modules – standard width of 7.52”  
 Inner radius: 13.188”  
 Food approved

## J.101

Belt Data.			
Belt material	Rods	Max. belt pull (lb)	Belt weight lb/square foot
Polyacetal (POM)	PP	350	1.43
	Nylon	550	1.43
Polypropylene (PP)	PP Nylon	Please contact Sparks Belting	

Belt surface: Smooth.  
 Open area: 52 %  
 Strength: Ideal for heavy duty spirals and J curves.  
 Material/colour: POM, PP  
 Cleanability: Good  
 Accessories: 25 (.98), 50 (1.97) and 75 (2.95) mm flights, friction top, hooks or tabs.  
 Application: Spiral coolers, radius conveyors in "J-curves".  
 Construction: Side modules, centre modules.  
 Width interval: 20 mm (.79"). E.g: 210 (8.27"), 230 (9.06")mm etc.  
 Inner radius: Please see next page.  
 Food approved

## 7. S.50 Radius Belt

**Pitch 50 mm (1.97")**

## S.201

Belt Data			
Belt material	Rods	Max. belt pull (lbs).	Belt weight lb/square foot
Polyacetal (POM)	PP	450	1.64
	Nylon	675	1.64
Polypropylene (PP)	PP Nylon	Please contact Sparks Belting	

Belt surface: Smooth.  
 Open area: 47 %  
 Strength: Ideal for heavy duty spirals and curves.  
 Material/colour: POM, PP  
 Cleanability: Good  
 Application: Spiral coolers, radius conveyors.  
 Construction: Side modules, centre modules.  
 Width interval: Normally 20mm(.79") e.g: 210mm (8.27), 230mm etc.  
 Inner radius: Please see next page.  
 Food approved

B = A + 4 mm (.16")

# Installation instructions

## Radius belts

### 1. Frame construction.

The frame must be sufficiently stiff to prevent twisting or other forms of dimensional change while loaded. The outer dimensions must remain within stated tolerances, so that the belt cannot become trapped or fall out of the slide rails.

### 2. Slide rails.

There should be as few joints as possible and they should always be avoided in the curves. All joints must be smooth, so that the belt cannot get caught in a joint.

### 3. Sprockets.

The sprocket in the outer curve should be fitted as close to the outer edge as possible. All drive sprockets should be locked so that they cannot move sideways.

Contrary to the drive sprockets, the non-driven sprockets should be fitted, so that they run freely on the shaft.

### 4. Turning shoe.

It is vital that the transition between the turning shoe and the slide rails is smooth with no risk of the belt getting caught.

### 5. Tightening.

The belt should normally be installed with an excess length of approx. 3 elements, depending on the total length of the belt.

In the event of the return belt rising immediately after the drive unit, a take-up roller may be necessary. On short belts, tightening to a single element's excess length may be sufficient.

An "accumulation" of the belt must never occur at the drive sprockets.

### 6. Extra drive unit.

On heavily loaded belts, an extra drive unit may be necessary. This motor can be of the type "BAUER DREHFELDMOTOR" in order to prevent the two motors from working against each other. The extra motor should be placed at the non-driven end, but under special circumstances may be placed at the centre of the belt.

## Calculation for a S-curve

Radius Belt example 90° S-curve.

- A: Belt width.
- B: Min. inner radius = belt width x collapse factor.
- C: Straight run on pull and return = belt width.
- D: Straight run between 2 curves = min. 2 x belt width.
- E: Curve length.

### Calculation example

Belt width 16.57" – 2 pcs. 90° turning radius.  
Collapse factor = 1.6

$$\begin{array}{rcl}
 B = 16.57 (A) \times 1.6 & = & 26.512'' \\
 C \text{ min.} & = & 16.57'' \\
 D \text{ min.} & = & 33.14'' \\
 E \frac{[(B + A) \times 3.14]}{4} & = & 33.82''
 \end{array}$$

$$\text{Belt length} - [C/C] (2 \times C) + D + (2 \times E) = 134''$$

Total belt length - (C/C x 2) + sprocket pitch diameter.

# Construction (A)

## Construction of conveyors using Dura-Lock modular belts

The construction and assembly of conveyor systems using Dura Lock modular belts are not significantly different from conveyor systems utilising other belt types. There are, however, certain points which we would like to emphasise. Therefore we have prepared general assembly guidelines, which we hope will be helpful when designing and constructing a conveyor system.

Note that belt widths under 19.69" have a tolerance of  $\pm 1/8"$  and belt widths over 19.69" have a tolerance of  $\pm 1/4"$ .

There are 3 diagrams illustrating horizontal conveyor systems.

Fig. 1 relates to short lightly loaded conveyor systems. This type of construction means the belt is tightened and tensioned by adjustment at one or both shafts. This conveyor system can be used in a reversing operation. It is important to be aware of temperature fluctuations when using this type of construction. In the event of low temperatures, the belt will contract significantly. At high temperatures the belt will expand, which could result in poor or even complete lack of engagement from the sprockets on the drive wheels.

Fig. 2 relates to longer and more heavily loaded conveyor systems. This conveyor system cannot be used in a reversing operation. The first support after the drive wheel ensures the best possible engagement. The second support should be located in a position where the weight of the belt "sag" between the first and the second support is sufficient to maintain the correct belt tension. This ensures continuous positive engagement from the sprockets on the drive wheel. Another advantage of this type of construction, which features a series of belt supports, is that it is possible to accommodate any belt contraction/expansion by fluctuating the degree of belt "sag" between all other supports.

Fig. 3 is similar to the conveyor system shown in the middle diagram. The only exception is that it can be used in a reversing operation. However, it cannot handle the same heavy loads.

A = 8" – 12"  
 B = Min. 40" - max.10% of the centre distance.  
 C = 0 – 2"  
 D = S. 12 min. Ø .75" - S. 25 min. Ø 2" - S. 50 min. Ø 4"  
 E = S. 12 min. 2" - S. 25 min. 3" - S. 50 min. 6"  
 F = S. 12 min. Ø .75" - S. 25 min. Ø 4"- S. 50 min. Ø 6"

## Construction examples (B)

### Construction of conveyors using Dura-Lock modular belts

There are 2 diagrams illustrating elevator conveyor systems.

Fig. 1 shows a very common construction. The drive sprocket is at the top of the elevator system. The first support after the drive sprocket ensures the best possible engagement. The second support should be located in a position, so that the weight of the belt "sag" between the first and the second support is sufficient to maintain the correct belt tension. This ensures continuous positive engagement from the sprockets on the drive sprocket. If there is insufficient distance between the first two supports, the tensioning belt "sag" should be moved to the area between the second and the third support. When provision has been made for adequate tensioning by following the above points, the belt can then be enclosed and allowed to run inside the conveyor framework for the remainder of the return leg.

At the point where the belt runs negatively, between the horizontal and incline (E-radius), it can be held in position and retained at the sides by the synthetic guide rails. Another option is the use of the hold-down segment built into the underside of the belt. These segments attach onto a suitable rail incorporated in the conveyor support bed.

Fig. 2 shows a similar elevator system. It is constructed in the same way.

In some exceptional cases, more tightening/tensioning may be necessary. This can be achieved by using counter-weights or springs.

Construction example (mm)

Fig. 1

Fig. 2

A = 7.87" – 11.81"

B = Minimum 40" – max 10% of the center distance.

C = 0 – 2"

D = S.25 minimum diameter = 2". S.50 minimum diameter = 4"

E = Minimum radius = 6"

When distance between shafts is more than 12', a roller is recommended on the return way.						

## Thermal expansion / contraction (C)

All types of materials change dimensions when the temperature changes  
Therefore you need to take this into consideration, when calculating a belt's dimensions and the frame constructions.

Below are the relevant factors for calculating a Dura Lock conveyor belt.

<u>Material</u>		Expansion/contraction <u>in/ft/°F</u>
-----------------	--	--

### Belt:

Polypropylene	<b>PP</b>	0.0008
Polyethylene	<b>PE</b>	0.0015
Polyacetal	<b>POM</b>	0.0006

### Wear strip:

U and V profile	<b>PEHD</b>	0.0009
Frame material:		
Aluminium		0.00014
Stainless steel		0.00007

### Formula:

E	=	L x ( T2 - T1 ) x K
C	=	L x ( T2 - T1 ) x K
E	=	Expansion ( in )
C	=	Contraction ( in )
L	=	Length/width of belt ( ft )
T1	=	Normal temperature ( 70°F )
T2	=	Working temperature
K	=	Coefficient

### Example:

55' long, 53" wide, PP. Normal temp. 70° Working temp. 185 °F.

Length:	E = 55 x (185-70) x 0.0008
	E = <u>5.06"</u>

Width:	E = 4.42 x (185 - 70) x 0.0008
	E = <u>.406"</u>

SERVICE FACTOR ( SF)	
Unloaded starts & load applied gradually	1.0
Frequent starts under load, more than 1/hr.	+ 0.2
Belt speed greater than 100ft/min.	+ 0.2
Elevating conveyors	+ 0.4
Pusher conveyors	+ 0.2
SF total	

All friction values are theoretical and may not reflect the working conditions. For new belt on new wear strips, the values will in most cases be higher to begin with. The theoretical values are in any respect given under optimal condition. For more details please contact Sparks Belting.

Coefficient of start-up friction between wear strip and belt									
Wearstrip material	Belt material								
	Polypropylene				Polyethylene		Acetal POM		
	Smooth		xx Abrasive		Smooth		Smooth		
	Wet	Dry	Wet	Dry	Wet	Dry	Wet	Dry	
PEHD	0.09		0.11	-	-	-	0.09	0.08	
UHMW	0.11		0.13	-	-	0.24*	0.32*	0.10	0.10
Steel	0.26	x	0.26	0.31	0.31	0.14	0.15	0.18	0.19

xx = Contact Sparks Belting

x = Not recommended over 50 ft/min.

\*Note that the wear will increase with the belt speed. It should be expected to be extensive for speeds greater than 50 ft/min

Coefficient of friction between product and belt						
Material:	Polypropylene		Polyethylene		Acetal POM	
	Smooth		Smooth		Smooth	
	Wet	Dry	Wet	Dry	Wet	Dry
Glass	0.18	0.19	0.08	0.09	0.13	0.14

Cardboard	-	0.21	-	0.15	-	0.13

## Material description ( D )

### **Polyethylene:**

Thermal plastic with a weight mass of approx 0.92. grams/cm<sup>3</sup>.  
Suitable for use in cold areas.  
Temperature range from -100°F to + 151°F.  
High chemical resistance.  
FDA approved.  
Tough yet flexible material with a high impact strength.

### **Polyethylene Plus:**

Thermal plastic with a weight mass of approx. 0.92 grams/cm<sup>3</sup>.  
Suitable for use in medium temperature areas.  
Temperature range from -4°F to + 176°F.  
High chemical resistance.  
FDA approved.  
Same characteristics as Polyethylene, with a 30% larger tensile strength as well as a reduced impact strength.

### **Polypropylene:**

Thermal plastic with a weight mass of approx. 0.92 grams/cm<sup>3</sup>.  
Suitable for use in higher temperature areas.  
Temperature range from +41°F to +212°F.  
High chemical resistance.  
FDA approved.  
A strong material with a medium tensile strength, low impact strength at low temperatures.

### **Polypropylene heat stabilized:**

Thermal plastic with a weight mass of approx. 0.92 grams/cm<sup>3</sup>.  
Suitable for use in high temperature areas.  
Temperature range from +41°F to +248°F.  
High chemical resistance.  
FDA approved.  
Medium tensile strength, low impact strength at low temperatures.

### **Polypropylene Composite:**

Thermal plastic with a weight mass of approx. 1.25 grams/cm<sup>3</sup>.  
Suitable for use in high temperature areas.  
Temperature range from -4°F to +266°F.  
High chemical resistance.  
A strong and consistently stable material. Extremely high tensile strength, but has increased friction between the support and the belt. Low impact strength at low temperatures.

**Polypropylene antistatic:**

Thermal plastic with a weight mass of approx. 0.98 grams/cm<sup>3</sup>.  
Suitable for use in areas requiring electrical diversion.  
Temperature range from +41°F to +212°F.  
High chemical resistance.  
Not FDA approved  
Tensile strength as normal polypropylene.

**Polyacetal (POM):**

Thermal plastic with a weight mass of approx. 1.4 grams/cm<sup>3</sup>.  
Suitable for use in both warm and cold areas.  
Temperature range from -45°F to + 203°F.  
Has a limited resistance to certain chemicals. If in doubt, please contact Sparks Belting.  
FDA approved.  
Consistently stable material with a high tensile strength and high wear resistance.  
Low friction between belt and support.  
Low impact resistance at low temperatures.

**Polyacetal antistatic:**

Thermal plastic with a weight mass of approx. 1.4 grams/cm<sup>3</sup>.  
Suitable for use in areas requiring electrical diversion.  
Temperature range from -45°F to +203°F.  
Not FDA approved  
Other characteristics, are the same as polyacetal.

**Nylon 6:**

Thermal plastic with a weight mass of approx. 1.08 grams/cm<sup>3</sup>.  
Suitable for use in both warm and areas.  
Temperature range from -49°F to +230°F.  
High chemical resistance. Not suitable in damp areas at high temperatures.  
FDA approved.  
Tough yet flexible material with a high tensile strength as well as a high impact strength.

**Nylon 6.6:**

Thermal plastic with a weight mass of approx. 1.1 grams / cm<sup>3</sup>.  
Suitable for use in both warm and cold areas.  
Temperature range from -49°F to +302°F.  
High chemical resistance, though not suitable for use in very damp areas at high temperatures.  
Not FDA approved  
Tough yet flexible material with a high tensile strength as well as a high impact strength.

**Nylon antistatic:**

Thermal plastic with a weight mass of approx. 1.1 grams/cm<sup>3</sup>.  
Suitable for use where electrical diversion is required.  
Temperature range from -49°F to +230°F.  
High chemical resistance. Not suitable in wet areas.  
Not FDA approved  
Tough yet flexible material with a high tensile strength as well as a high impact strength.

**Fire retarding polypropylene:**

Thermal plastic with a weight mass of approx. 0.98 grams/cm<sup>3</sup>.  
Suitable for use in fire hazard areas, as in microwave ovens and the like.  
Temperature range from +41°F to +248°F.  
High chemical resistance.  
Flammability VO (3,2 mm).  
FDA approved.  
Strong material with medium tensile strength. Low impact strength at low temperatures.

**Friction material:**

Thermal plastic with a weight mass of approx. 1.14 grams/cm<sup>3</sup>.  
Suitable for use in both warm and cold areas.  
Temperature range from -13°F to +176°F.  
High chemical resistance.  
FDA approved.  
Soft material with high friction, low tensile strength.  
Suitable to put on the surface of PE and PP belts.  
Used for belts with slight inclination.

**Silicone and teflon material:**

An additive added to polyethylene and polypropylene.  
This material prevents products from freezing or sticking to the belt.  
FDA approved.  
The characteristics of the basic material are not changed essentially.

**Metal detectable:**

An additive added to polypropylene.  
The compound is designed to be detected by metal detectors.  
Sensitivity degrees may vary with customer's equipment.  
The material complies with FDA regulations for use in food processing and packaging.

# Chemical resistance ( E )

## The chemical resistance of plastic materials.

The values in the following tables are guideline values. Factors such as filling material, temperature, concentrations, stress, stress time etc. can alter these values dramatically. Therefore no guarantee can be given for the correctness of said values. The values are valid at an ambient temperature of 68°F, and unless otherwise stated, with strong concentrations.

### Explanation of symbols:

+	: resistant:	None or only negligible changes in weight ( < 0.5% ). No changes in mechanical characteristics.
±	: qualified resistance:	After a period of time, significant changes in weight and mass ( 0.5 - 5.0%). Possible discoloration and reduction in strength and ductility. Qualified usability, though only when dealing with simple material requirements.
-	: inconstant:	It is rapidly subjected to serious attack, and changes in weight and mass (> 5%), and critical in strength and ductility. Not recommended for use.
%	: concentration:	If value is not given it is because no test results are available from our suppliers.

# Installation and maintenance ( F )

## Installation and maintenance instructions for Dura-Lock conveyor belts

Although belts made by Sparks Belting are easy to install and maintain, there are some points which should be observed:

### **Sprockets:**

1. Dura Lock sprockets can be supplied for two types of shafts:

#### **A - Square shaft.**

- Ensure that the sprockets are aligned, so that the gear teeth are not displaced.
- For sprockets with lateral control, the middle sprocket should be fixed and the others allowed to float freely.
- For sprockets without lateral control, spacers can be mounted between the sprockets to prevent them from moving sideways.
- An acetal plastic (POM) retainer ring is also supplied with a 6 mm stainless centre screw which should be screwed down into the shaft. The groove for the screw should be made with a drill, file or right-angle grinder (depth 1/32" – 1/16").

#### **B - Round shaft with key way ( ANSI / DIN standard ).**

- Ensure that the sprockets are aligned, so that the gear teeth are not displaced.
- For sprockets with lateral control, the middle sprocket should be fixed and the others allowed to float freely.
- For sprockets without lateral control, spacers can be mounted between the sprockets to prevent them from moving sideways.
- Retainer rings are not supplied for sprockets with round shaft. The sprockets can be fixed in position by making a threaded hole in the hub above the keyway.

2. The sprockets are normally supplied in acetal plastic (POM), but are also available in Nylon (PA6), and Polypropylene (PP) in cases where aggressive substances are used. (When in doubt, please contact Sparks Belting.)
3. Wherever possible, the drive sprocket should be located between the supports.
4. The number of drive sprocket and supports can be seen from the table (page78).
5. For correct dimensions and specifications, refer to the drawings and tables for the respective belt types.
6. Clean the sprockets regularly, as the accumulation of dirt on the sprockets can result in poor, or a complete lack of, engagement with the belt.

# Belt

## 1. Installation:

When installing a Dura Lock belt, it is advantageous to ensure that the sprockets engage correctly, although not strictly necessary since the sprockets engage during operation. One should be careful to ensure that the side of the belt has a straight edge before securing with the plastic rod when assembling a belt. The plastic rod used for assembling the belt is equipped, either a) with a head at one end or b) with clips.

a) After installation, any excess plastic rod should be cut off 1/32" – 1/16" from the belt's outer edge. Soldering/plugging can be carried out with a soldering iron. If a soldering iron is not available, the plastic rod can be heated using, for instance, a lighter, after which soldering can be carried out with a soft press.

b) After installation, all rods are being locked, with the clips supplied with the belt

## 2. Maintenance:

In order to minimise wear and to prevent the belt from slipping it should be cleaned regularly.

Slipping of the belt can be caused by the belt being insufficiently tightened. If the conveyor is equipped with a tightening device, then this should be used to try to tighten the belt. If this is not sufficient, the belt should be shortened (see trouble-shooting table).

If the belt continues to slip, then contact Sparks Belting.

New belts stretch, and it is therefore necessary to shorten the new belt shortly after operation has begun. This will usually be necessary after approx. 50 hours of operation.

## 3. Shortening/replacing damaged modules:

Always ensure that there are spare plastic rods and modules for the belt. Three extra rods are supplied with every new belt. Spare modules in standard widths of 7.87", or other customized widths can be supplied by Sparks Belting upon request.

When shortening/replacing damaged modules, the plastic rod can be removed most easily by cutting it as close to the edge of the belt as possible. The part which has been cut off can then be removed using a knife or screwdriver, and the rest of the rod can be knocked out using a punch.

When shortening the belt, excess modules should be removed. In the case of damaged modules, these should be removed and replaced by new modules.

The belt can then be reassembled with new rods as described above in the section on installation.

In case of emergency, when no spare rods are available, the link closest to the edge can be removed so that an old rod can be used. This must be done only in cases of emergency. If more extensive repairs are required, then contact Sparks Belting for a quotation. In the event of extensive damage, it may be more economical to buy a new belt.

# Malfunction ( G )

## **If the belt is malfunctioning**

### **If the belt is not properly aligned:**

Test / check: That the drive shaft and the flange roller are adjusted correctly.

### **If the belt pulls to one side:**

Test / check: That the shaft is adjusted correctly; that the belt mounting stands rectangular.  
That the belt is tightened to the same degree on both sides.

### **If the edges of the belt wear:**

Test / check: That the shaft is adjusted correctly; that the gap between the edges of the belt and the frame is wide enough when the operating temperature is at its highest and that the belt's supporting structure stands rectangular. That the shafts are locked in place so that they cannot move from side to side ( if necessary, use retainer rings ).

### **If the belt jumps a notch on the sprockets:**

Test / check: That the sag on the belt is adjusted so that it engages the sprockets correctly ( tighten as little as possible ). That the products / materials do not collect on the return track.

### **If the belt is subject to severe wear and tear:**

Test / check: That it is not being operated with excessive amounts of gravel, sand or similar products.  
That the belt is operating with a uniformly distributed load.  
That the belt is supported correctly. That the belt is not running at excessive speeds.  
That the correct wear strips are being used. That the belt's supporting structure is level.

### **If the sprockets are subject to severe wear and tear:**

Test / check: That the shafts are not twisted or bent, and that they are adjusted correctly.  
That the sprockets have been fitted correctly and that there are enough of them. That the belt is not being run too quickly or too tightly. That the belt is not being operated with excessive amount of gravel, sand or similar products.

### **If the rods are subject to severe wear and tear:**

Test / check: That the belt is not being operated with excessive amounts of gravel, sand or similar products. That the belts is not being run too quickly. That the materials do not become congested on the belt.

**If the rods work themselves loose from the belt:**

Test / check: That the gap between the belt edges and the frame is wide enough when the operating temperature is at its highest. That the rods are fitted correctly and locked.

**If the wearstrip are subject to severe wear and tear:**

Test / check: That the belt is being operated with the correct type of wear strip. That the belt is not too tight.

**If the edges of flights become worn:**

Test / check: That there is enough space on the return track.

**If the flights break:**

Test / check: That the flights do not hit against the frame. That blockage do not occur at the in-feed.

**If the belt becomes discoloured or is attacked by chemicals:**

Test / check: That correct cleaning procedures are followed. That white belts are not exposed to strong sunlight ( they turn a yellowish colour - use dark coloured belts instead! ). That the operating temperature is not too high.
